

Nexus 3 Full Installation Guide (158GB)

Pre-Requisite: Download the Files

Because this file is massive (**158GB**), you must download it using a torrent client.

- Recommended safe clients for Windows and Mac include **µTorrent**, **Tixati**, or **BitTorrent**.

Windows Installation Steps

1. Copy the Plugin Files

- Locate the **VST** folder in your downloaded package.
- **Copy and paste** its contents into your computer's 64-bit plugin directory.
 - *Standard Location:* `C:\Program Files\VSTPlugins`

2. Copy the reFX System Folder

- Find the folder named **reFX** in your package.
- **Copy and paste** it exactly into this folder:

`C:\Users\Public\Documents`

3. Place Your Massive Sound Content

- Locate the main **Nexus 3** folder (this holds all your 158GB of presets, samples, and NKS files).
- **Copy and paste** this folder onto any hard drive you prefer.
 - *Tip:* Because of the large size, an external drive or secondary drive is ideal (e.g., `D:\Nexus Library`).

4. Link the Sounds in `settings.json`

1. Navigate to: `C:\Users\Public\Documents\reFX`
2. Right-click the **settings.json** file and open it with **Notepad**.
3. Locate the line that says `"library_folder"`.
4. Replace the existing text with the exact path to where you saved your 158GB Nexus folder in Step 3.
5.  **Critical Requirement:** You *must* use double backslashes (`\\`) for the path, or the plugin will crash.
 - *Correct Example:* `"library_folder": "D:\\Nexus Library\\"`
6. **Save** and close the file.

5. Launch & Verify

- Open your DAW (FL Studio, Ableton Live, Cubase, etc.).
 - Load **Nexus 3**, and it will automatically detect and load your 158GB library!
-

macOS Installation Steps

1. Copy the Plugin Files

Open the **Plugins** folder in your downloaded package. **Copy and paste** each file into its exact matching system location below:

- **Nexus.component** → `/Library/Audio/Plug-Ins/Components`
- **Nexus.vst** → `/Library/Audio/Plug-Ins/VST`
- **Nexus.vst3** → `/Library/Audio/Plug-Ins/VST3`

2. Copy the reFX System Folder

- Find the folder named **reFX** in your package.
- **Copy and paste** it exactly into this folder:

`/Users/Shared/`

3. Place Your Massive Sound Content

- Locate the main **Nexus 3** folder (this holds all your 158GB of expansions, presets, and samples).
- **Copy and paste** this folder anywhere you prefer.
 - *Example location:* `/Applications/NEXUS library/`

4. Link the Sounds in `settings.json`

1. Open Finder and go to: `/Users/Shared/reFX`
2. Right-click the **settings.json** file and open it with **TextEdit**.
3. Locate the line that says `"library_folder"`.
4. Modify the path to point directly to your 158GB Nexus 3 content folder from Step 3.
 - *Correct Example:* `"library_folder": "/Applications/NEXUS library/"`
5. **Save** and close the file.

5. Launch & Verify

- Open your DAW (Logic Pro, Ableton, etc.).
- Load **Nexus 3**, and it will automatically read your new settings and populate your library!

Included Content & Compatibility

- **What's Inside:** Full Factory Presets & Samples, Arpeggiator Patterns, Trancegate Presets, and Impulses.
 - **Verified Working On:** Windows 10 (Ableton Live 11) & macOS (Logic Pro and all major DAWs).
-
